

FQSX

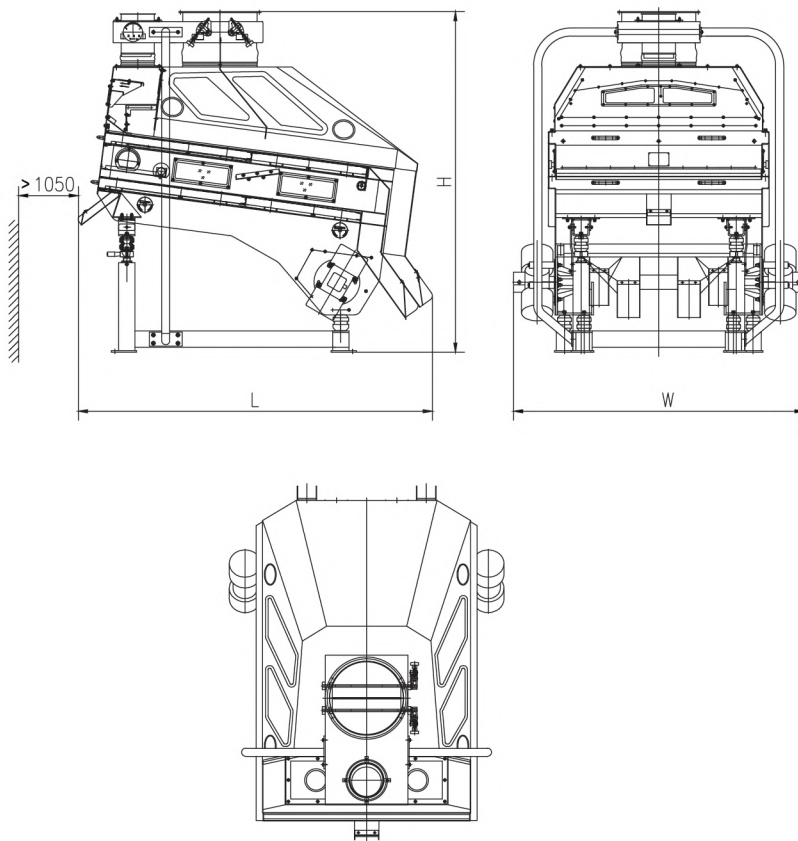

GRAVITY DESTONER

With principle of combination of wind, vibration and sieve, the machine is mainly used for the classification and impurity removal of wheat, paddy, corn and other grains. It concentrates light impurities such as grass seeds, rye, etc, and remove gravel and mud lump. With long sieve body, the machine not only increases the sieve area but also improves the stone removal effect dramatically. The air adjusting hood adopts a front and rear separation structure, which can be adjusted separately according to the needs of the user.
