

DPMV

FLOW BALANCER

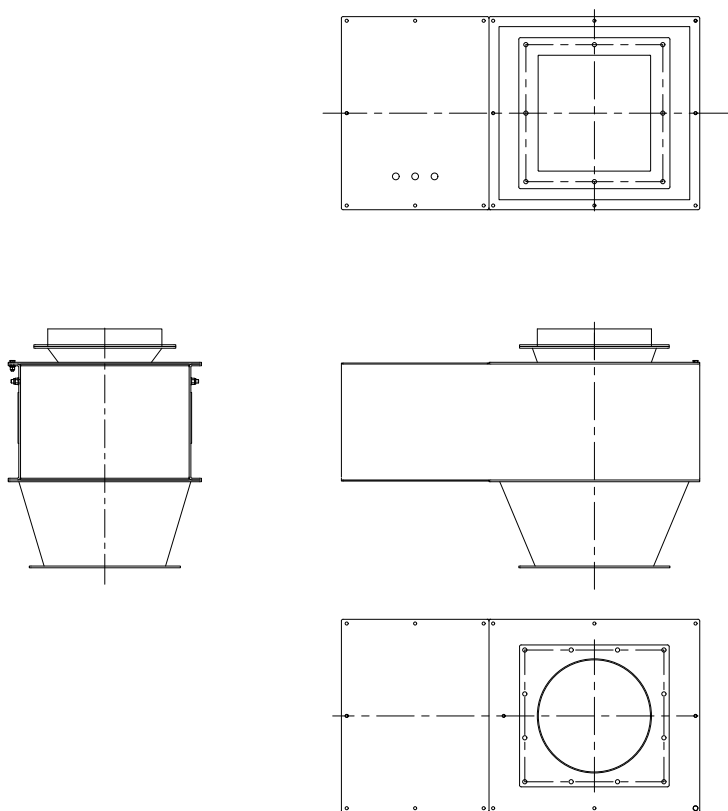

The FLOW BALANCER is designed for precise grain blending and controlled feeding of raw materials. By delivering different wheat grades in fixed ratios, it enables flour mills to achieve high extraction rates, produce premium flour, and maintain consistent product quality. The unit operates reliably regardless of wheat quality, impurities, or moisture content, ensuring a stable mass percentage with a high level of automation. It is an essential component in modern milling operations.

As an electromechanical system with numerous electronic components, it requires careful handling and regular maintenance. It is particularly well-suited for automated flour mills equipped with process control systems.
